6 weeks - market	3 weeks - market	13340225	17% Turkey, Duck and Goose Finisher Pellets	275 g/day	250 g/day

Feeding Hen/Chick Scratch

- Hen/Chick Scratch is a mixture of corn, oats and wheat.
- It is not a balanced diet, and birds may develop nutritional deficiencies if they are fed scratch alone.
- Scratch can be used as a treat, but should be fed at no more than 5% of the bird's daily diet (ex: max of 10-12 g/day for a mature hen).

Note on Medicated Feeds

Poultry feeds containing medication help prevent coccidiosis, a disease which can cause lost productivity, poor health and mortality in your flock. Birds build immunity to coccidiosis over time so medication is not required in older birds. Medication should not be fed to laying hens that are producing eggs. Read and follow the instructions on your feed tag if you're feeding a medicated feed. Some chicks may be vaccinated for coccidiosis and do not require medicated feed.
